

Developing the National Aboriginal and Torres Strait Islander CANCER FRAMEWORK

Cancer mortality gap widening

Indigenous Australians more likely to die from cancer than non-Indigenous Australians

KEY FRAMEWORK DEVELOPMENT PRINCIPLES

Collaborative Partnership

Cancer Australia

Menzies School of Health

Establishing the evidence

Systematic review identified key themes, barriers and enablers

68 articles

- Prevention
- Screening & early detection
- Diagnosis & treatment
- Palliative care
- Survivorship

Consultation

6 face-to-face forums

National Survey

326 people

52% of respondents were health professionals working across the cancer continuum

Online discussion boards

26 participants

Indigenous consumers, carers & community

Health professionals

Service providers

Policy makers

Cancer control professionals

Researchers

SYNTHESISING THE EVIDENCE

Cancer Australia

Expert Steering Group
